

REDUCE CLAIM VOLATILITY AND RESERVES ACROSS YOUR POOL

PROBLEM

Most claim costs are driven by delays, like access to specialists and imaging, and gaps between injury, diagnosis, and treatment. These delays create longer claim duration, increased indemnity exposure, and higher overtime and backfill costs.

SOLUTION

Ready Rebound solves this by acting as a single point of coordination across the entire injury lifecycle by ensuring members are seen, diagnosed, and treated quickly, which reduces delays, shortens claim duration, and improves cost predictability across the pool.

Better Outcomes for Carriers, Employers, and Employees

WHAT THIS MEANS FOR RISK POOLS

At the portfolio level, compressing time-to-care drives:

- Reduced claim volatility across members
- Fewer high-cost outlier claims
- More consistent return-to-work timelines
- Improved predictability in indemnity and reserves

Ready Rebound works alongside existing TPAs and workers' comp programs to enhance outcomes without replacing current infrastructure.
